dnsdomainname
DESCRIPTION
Hostname is used to display the system's DNS name, and to display or
set its hostname or NIS domain name.
GET NAME
When called without any arguments, the program displays the current
names:
hostname will print the name of the system as returned by the gethost-
name(2) function.
domainname will print the NIS domainname of the system. domainname
uses the gethostname(2) function, while ypdomainname and nisdomainname
